

Prihoda Grow

Custom Fabric Ducting & Diffuser
Systems for Agriculture
Benefits:

- Prevents Mold Growth
- Prevents Cross Contamination
- Reduces Overall Operation Costs
- Increases Crop Yield
- Reduces Curing Times
- Provides Flexible Air Flow to Fit Your
- Specific Crops Needs

Customized Systems & Optimum Ventilation

Prihoda's highly customizable system design provides optimum air distribution and humidity control on every rack in container operations and for any size vertical grow.

Mold Prevention with Humidity and Temperature Control

Prihoda helps you provide even and consistent temperature and humidity levels underneath the grow canopy, ensuring correct humidity rates throughout the growing and curing process.

Precision Air Distribution for Optimum Environmental Control

Environmental control is critical to any indoor agriculture application. Homogenous temperature and humidity around all plants ensure ideal plant transpiration and growth resulting in healthy plants and high yields.

Custom designed Prihoda Grow air distribution systems are easy to install, save considerable cost compared to metal and guarantee optimum conditions for any crop in any size growing operation.

Why Prihoda Grow? Efficient, custom engineered, and cost-effective air distribution for ideal environmental conditions in any indoor agriculture operation.

-  Custom engineered air distribution
-  40-70% less expensive than metal
-  Prevents condensation
-  Lightweight, easy to install
-  Custom dye printing of any image, pattern or logo

Match Your Growing Operation Environment

High-volume, even air distribution ensure homogenous temperature and humidity, with precisely controlled air distribution patterns for optimum air velocity at the plant level.

Comfort, Safety, and Productivity

From large-scale, high-volume air distribution to smaller systems custom-designed, Prihoda fabric ducting and diffusers provide an ideal and cost-effective solution for any industrial space.

Prihoda North America provides fabric duct technology with Environmental Benefits.

-  Optional 100% recycled fabric
-  66% less energy used during manufacturing
-  50% less water used during manufacturing
-  34% less greenhouse gas emissions
-  Free of red list ingredients for Living Building Challenge and Well Building projects
-  Optional anti-microbial coating
